Sigma-5: the 5-star servo drive...

It is a primary goal of OMRON YASKAWA to offer customers products and solutions that meet their needs. And the Sigma-5 servo drive offers exactly that. Precise positioning at the highest speed. Smooth and vibration-free operation. And the easiest possible start up. For machine builders this translates into better machine performance to meet exacting machine requirements. It also has a significant impact on increasing machine availability while reducing costs.

As Sigma-5 belongs to the product portfolio of a global leader in automation, you will have total world-wide service and support throughout the product life cycle. Moreover, ongoing technical developments by Omron will keep your machines in front, giving you an edge, both now and in the future.

...value delivered

- Meets the most demanding machine requirements
- Helps to maximize machine performance
- Minimizes total cost of ownership
- Increases machine availability

Flow wrap machine require various servo axes working in absolute synchronisation. Sigma-5 in combination with Trajexia allows synchronisation over the field proven Mechatrolink bus., greatly simplifying system wiring and reducing the chance on wiring errors.

...enhance machine efficiency while saving time and costs

The Sigma-5 servo drive excels in even the most demanding axis-control operations and applications, including those in the following industries and applications:

- Electronics
- Semiconductors
- Packaging
- Printing
- Machine tools
- Injection moulding
- Metal forming

This glass cutting machine has high demands on continues and smooth movement as each misalignment is directly visible. The Sigma-5 servo in combination with the Trajexia motion control give full control of each movement.

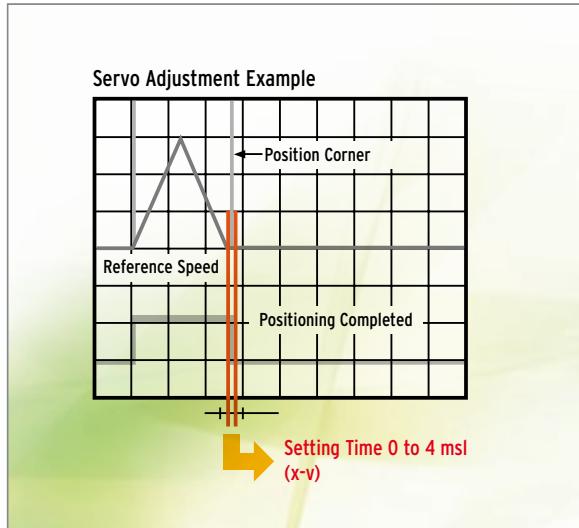

The machine uses picking techniques to place components on PCB's. The procedure must be very accurate, as the component pins must be placed at um accuracy. This is solved using the Sigma-5 series servo system because its dynamic performance.

The chip molding process is another candidate application. In this case the actual chip must be placed in high speed, but also very accurate.

Five reasons to choose Sigma-5

Outstanding performance

Sigma-5 delivers the highest performance in the industry, enabling your machinery to operate faster and with higher precision. The frequency response of 1.6 kHz combined with Sigma-5's innovative algorithm results in quicker positioning, smaller following error, very low ripple at low speed, higher accuracy and a settling time close to zero.

Moreover, the drive features mechanical vibration cancellation, which enables it to automatically cancel the vibration on the mechanics and control a huge inertia mismatch ratio range.

Space saving

The new and compact Sigma-5 design features 30 % fewer parts, which helps to save panel space and machine costs.

Proven quality

An installed base of well over six million units underlines the quality of Sigma-series servos. High reliability increases machine throughput and efficiency by reducing down-time and maintenance costs.

Single-phase, 230 VAC

Three-phase, 400 VAC

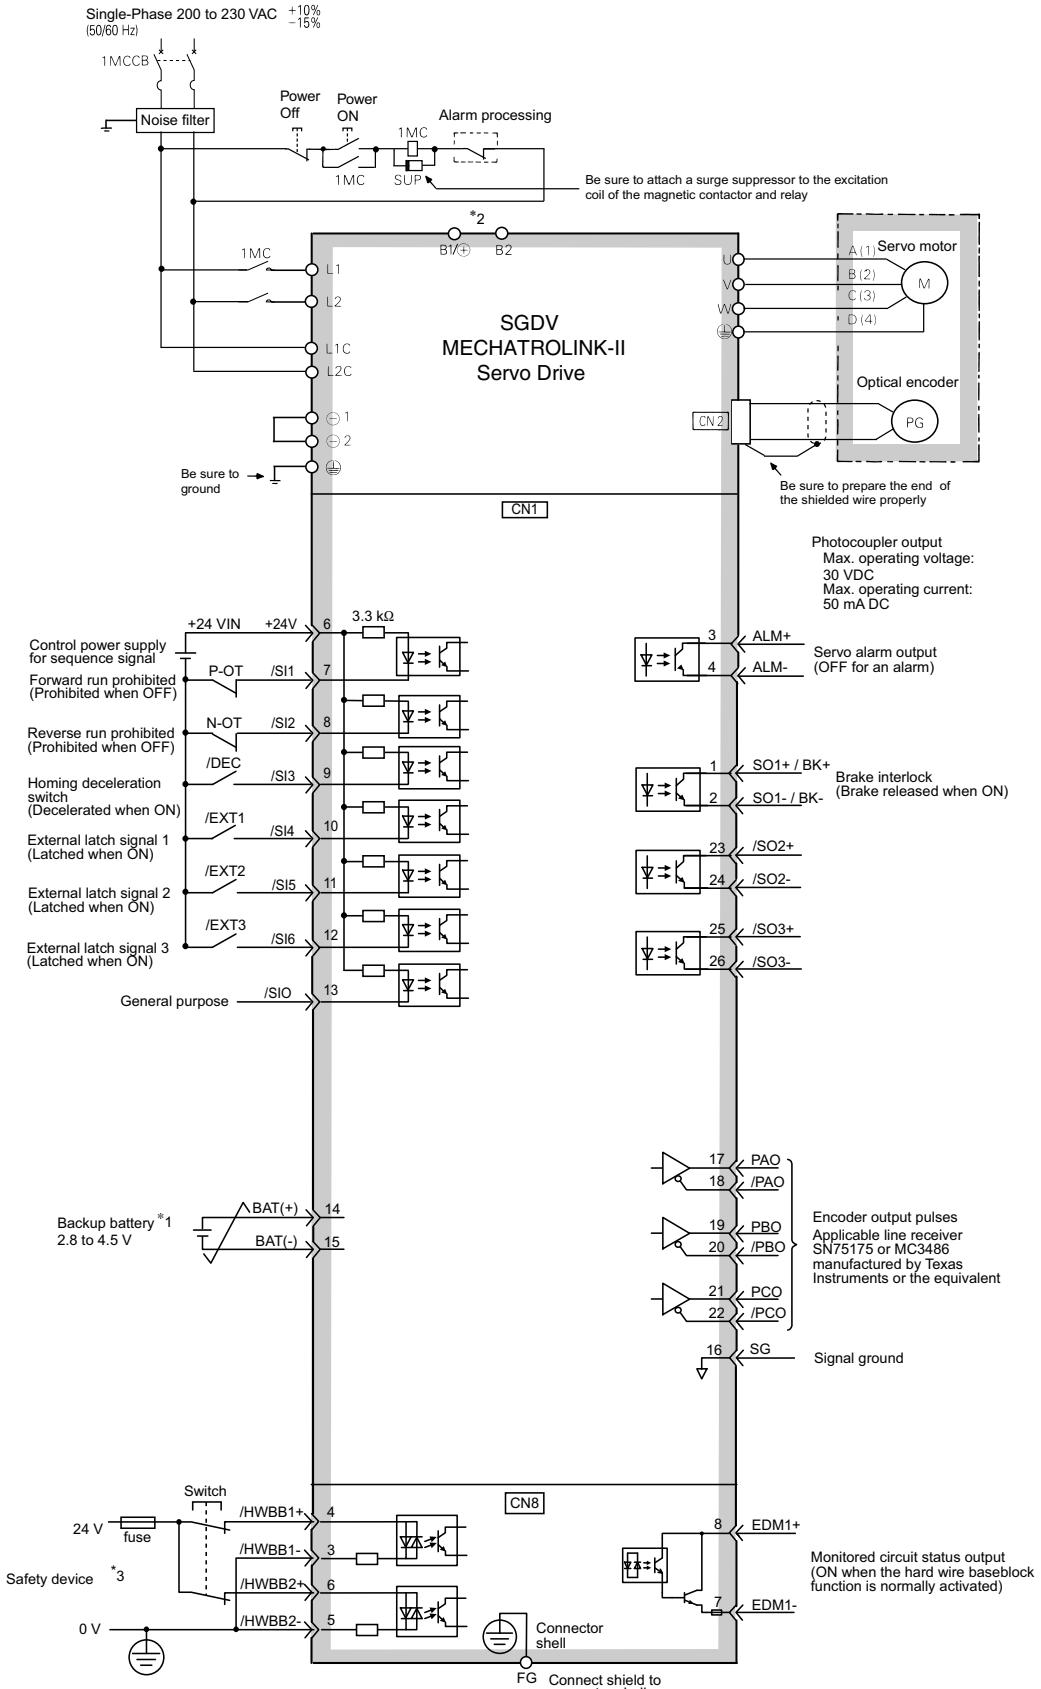

*1 The time constant for the primary filter is 30 μ s.

*2 Connect when using an absolute encoder. When the encoder cable for the battery case is connected, do not connect a backup battery.

*3 Normally short B2 and B3. If the internal regenerative resistor is insufficient, remove the wire between B2 and B3 and connect an external regenerative resistor between B1 and B2.

*4 For servo ON, connect to safety device and set wiring to enable safety function. When not using the safety function, use the servo drive with the plug (JZSP-CVH05-E, provided as an accessory) inserted into the CN8.

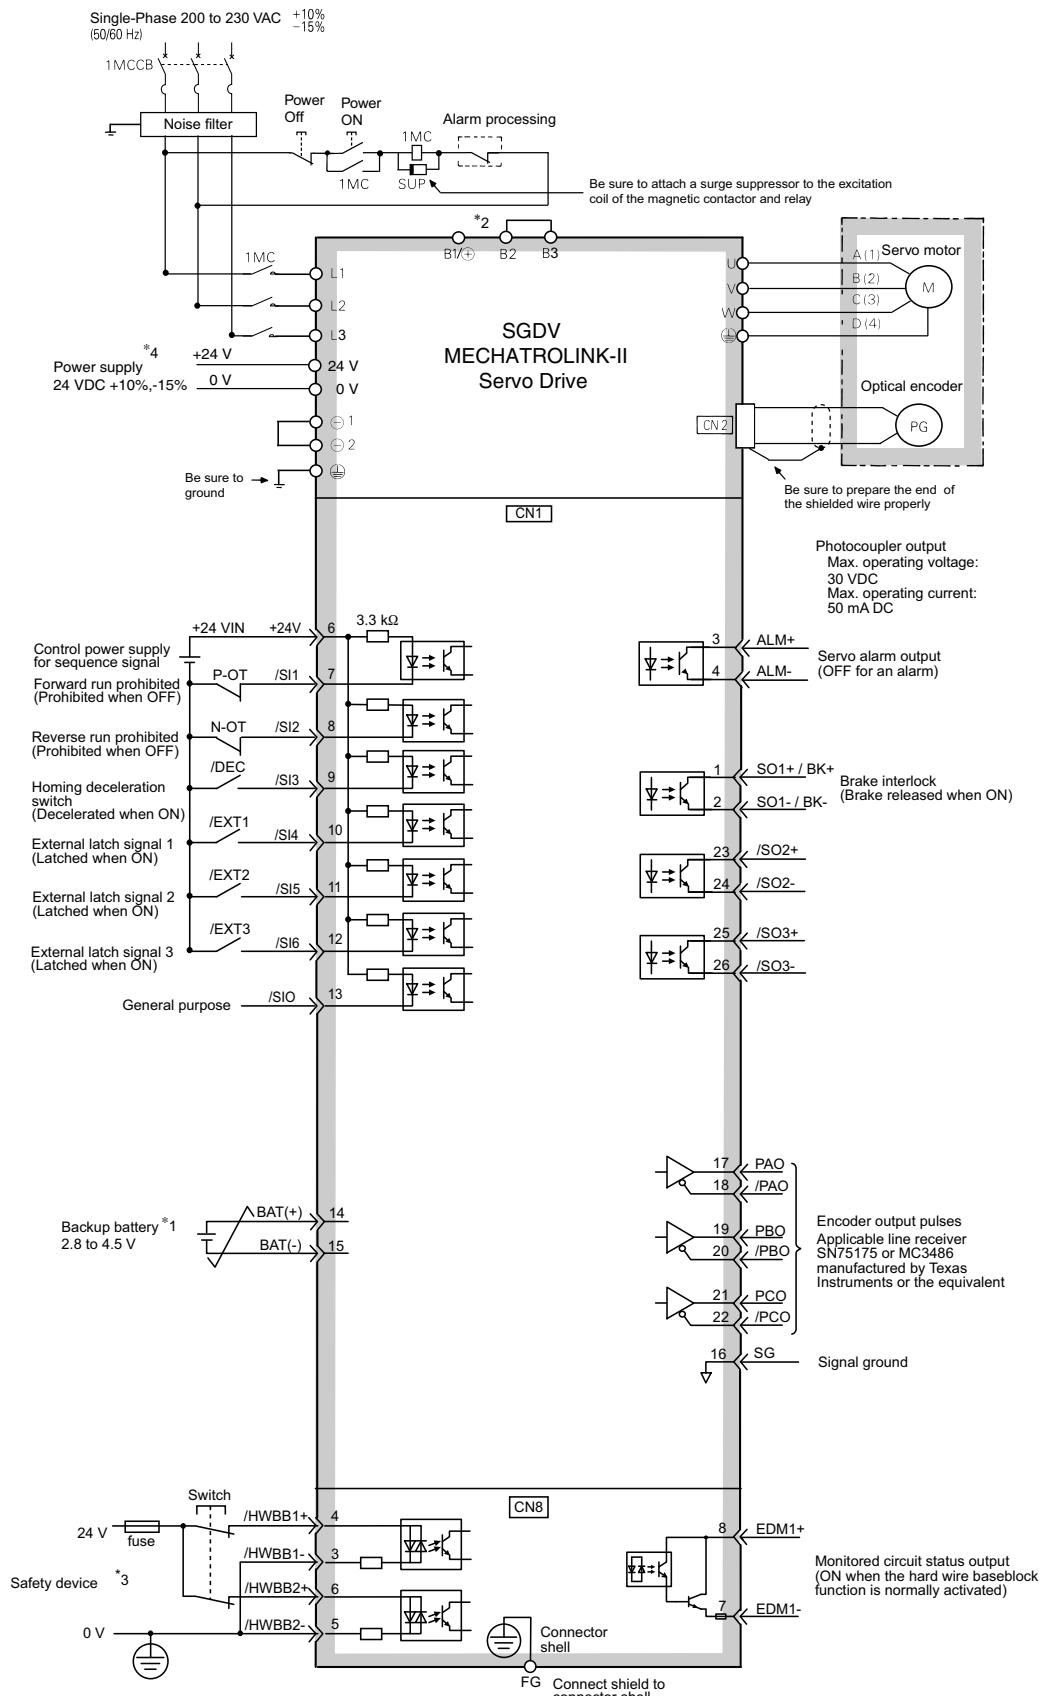

*5 It is the user's responsibility to obtain 24 VDC power supply.
